# Steps to creat iOS app build

1. set
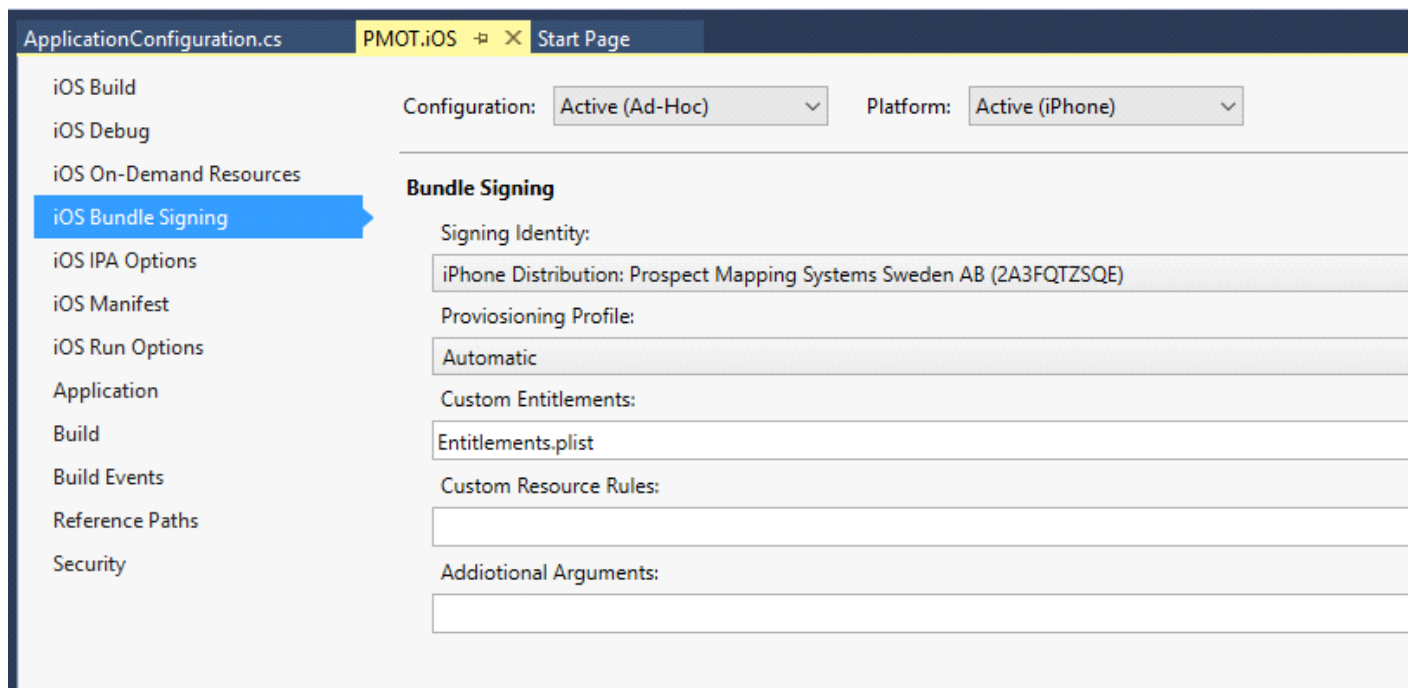

Solution Configuration = ad-hoc

Solution PLateform = iPhone

and select project to be built.

2. set project properties like

first you need to download iOS Distribution provisioning profile from 'developer.apple.com'

if not create new profile, download it and add it to keychain of iOS app host mac.

once you are done with it, you can see that profile in above image 'iOS Bundle Signing > Signing Identity.

set iOS Bundle Signing > Signing Identity = automatic | if you don't find your profile name here.

make sure that at top Confugaration and Plateform are same as in image

select checkbox shown in image.
